WITH ADDITION OF OUR NEW, PATENT PENDING BOOST-BY-WIRE™ CONTROL SYSTEM, YOU NOW HAVE THE BENEFIT OF FULL VARIABLE BOOST CONTROL!

As a consequence of using positive displacement superchargers as a power adder, you can have drivability issues under normal driving conditions. Since the power comes on like an "on/off" switch, it makes it difficult to control power demand in situations where you do not want maximum acceleration and can be unpleasant to drive. We solved this problem with our Boost-By-Wire™ Control System, eliminating the problem completely. The system we've developed works very simply; the more you press the accelerator pedal, the more boost your supercharger will produce. You still get all the neck-snapping instant power from the positive displacement supercharger, but it is now controlled with your foot as you need it and makes the vehicle much more pleasant to drive.

OPTIONAL Black-out Trim Package includes roof-mounted side bars, window trim, bodyside molding, hood extension, grille surround, lower front fascia trim, rear bumper trim, and liftgate accent (on models with factory chrome)

OE-quality SXR Series Supercharged and 800HP liftgate emblems
